## Task Manager for Confluence

Create, view, list, edit, and transition Jira issues within a Confluence page.

by **rozdoum**

The screenshot displays the application's interface. At the top, there is a table listing Jira issues with columns for Key, Summary, Type, Created, Updated, Due Date, Assignee, Reporter, and Priority. Below this, a detailed view of a specific issue is shown, including its description, status (In Progress), and a list of tasks. The interface is clean and integrates seamlessly with the Confluence environment.

Task Manager for Confluence is the app which offers a native interface to work with Jira issues within Confluence. The app frees you from context and tab switching and allows you to create, view, list, edit, and transition Jira tasks directly from a Confluence page.
